

AI-Powered Placement Preparation Portal

The **AI-Powered Placement Preparation Portal** is a comprehensive web-based platform that centralizes placement preparation by integrating coding practice, aptitude tests, interview preparation, resume building, and job notifications into a single system. It provides secure role-based access for students, faculty, and administrators. Students can practice coding in multiple programming languages with real-time execution, participate in coding contests, solve aptitude tests, and access learning resources for core computer science subjects. The portal also features an AI-assisted resume builder, resume analysis, and AI-powered mock interviews with personalized feedback to improve employability. Personalised dashboards track coding performance, aptitude scores, interview progress, and placement readiness while offering learning recommendations. Administrators can efficiently manage users, assessments, placement drives, companies, and job opportunities through a centralized dashboard with analytics and reports. The system ensures security through JWT-based authentication, encrypted password management, role-based authorization, and activity logging, providing a scalable and reliable placement preparation solution.
